

NOTES

235V for 12AX7 in v1a/b
210V for 5751 in v1a/b
CX1 & CX2 original SSS #002 is .01uF
CX1 & CX2 try .02uF for +3dB improved bass response below 82Hz
**(Two Rock uses .02uF in CX1 and CX2 positions. Good for bass at low levels.
Consider upgrading 100uf to 220uf filter caps if you use .02uf for CX1 & CX2)
Original #002 is fixed bias. This layout makes the bias adjustable.
For 270k or 100k, I personally like 270k (more reverb, on handdrawn schematic) versus 100k (visually confirmed on real #002)
